

This is simply a placeable wood chipper. Add logs and fuel to make wood chips fast. Load your product out of the silo spout.

Credits:

Without the awesome fabrik script this mod would not be possible. Marhu and kevink98 are responsible for the script. Many great mods along with the fabrik.lua can be found on marhu.net.

The cement pad used for the base of the silos are from the potato washer which is also a Marhu mod. If the rollers, wood animation, and chip emitters look familiar its because they are from the well known sawmills found on Marhu's site as well.

The silo spout was copied from a FS15 map by the name of Manchester. The maker of that map is Reaper9111.

As always feedback is appreciated. If you encounter any issues please feel free to contact me. I thank all my twitch viewers for information they share and the ideas they inspire. With their help I am able to edit and put these pieces out there for you to enjoy.
